Homework 06.11.2026

In geography this half term we will be learning about our local area, looking carefully at the different houses and buildings within our community. We are also learning about materials in science.

For homework we would like you to look carefully at your home, using your observational skills. Talk about the different features and what they are made from (windows-glass, door-wood etc) and **build what it looks like**.

You can also talk about the type of house you live in; flat, bungalow, semi-detached etc.

You could use:

- Building blocks
- Lego
- Magnetic tiles
- Natural materials (sticks, stones etc)

Take a photo of your creation and post it on class dojo's.

We look forward to seeing your creations!
